Product Information

Product Description

SANAVITA Ovulation Test is a rapid urine based test used for the qualitative determination of Luteinizing Hormone (LH) in urine to forecast ovulation.

Product Properties

SANAVITA Ovulation Test is an in-vitro diagnostic medical device. As a product for self-testing, it detects the increase in Luteinizing Hormone (LH) in urine. This phenomenon precedes ovulation by 24 to 48 hours. The day of this increase in LH and the following day are the most fertile days. The **SANAVITA Ovulation Test** is more than 99% accurate. This product has a shelf life of 2.5 years.

Applicable Product Standards

The conformity assessment procedure was carried out according to Annex IV (excl. Chapter 4 & 6) of IVDD 98/79/EC. All applicable harmonized standards are fulfilled.
